

CONDYLE POSITION INDICATOR SYSTEM

2500 CP CPI-III (H) Complete System

The Condylar Position Indicator (CPI) is a precision instrument for tracking condyle positions to a stable position during occlusal splint therapy and determining CO/CR discrepancies ("slide" or "fulcrum").

Includes:

Optical resolver, maxillary and mandibular frames with support column, axis pointer yoke, adhesive rods, adhesive dispenser, data record sheets (50), graph papers (20), GlueTabs (20) and elastic support bands (12).

2560 CP CPI-III Basic System

Includes:

Maxillary and mandibular frames with support column, graph papers (20), and Data record sheets (50).

9611 CP CPI Graph Pad (20 sets)

The Graphs are printed on crack-n-peel adhesive paper for easy placement and removal on the graph supports. Each pad has a right and left vertical (sagittal) mm grid and a horizontal grid for lateral condylar axis changes. The grids are printed in green ink on white paper.

9615 CP CPI Data Record Sheets (50)

The Data Record Sheets are used to store the used graph papers on an organized sheet for quick reference. Three CPI readings and one axi-path recording can be placed on one sheet (8½ x 11). The 50 individual sheets are glued together on one edge for easy storage and removal.

8275 CP CPI GlueTab™ (20)

The **GlueTabs** come in a booklet of four tabs per sheet. The adhesive backed **GlueTabs** are placed on the plastic incisal table so the hot melt adhesive rod material that supports the anterior vertical pin can be easily removed after a condylar position recording has been made.

3015 CP CPI Shur-Grip™ Adhesive Rods (12)

These hot melt adhesive rods are used in the glue gun dispenser for joining the anterior support pin solidly to the diamond shaped support table also known as the incisal table.
